ADVANCED COURSE IN PAIN MANAGEMENT

"Excellence in each activity we do, leads into the success we desire. Excellence is not a virtue or bless, it's an art to learn and possess. When excellence becomes habit success follows willingly."

Introduction

In India chronic pain is number one and most of the conditions associated with pain management are major challenge for health care professionals. Technology advancement along with physical illness understanding has increased life expectancy even in the number of debilitating pain- centered conditions posing a financial burden on the client and government.

This course covers the wide range of conditions pertinent to pain management to endow the educational needs of primary and secondary health care professionals. The course is not theoretical but practical to focus on direct application of current topics, case studies and Evidence Based Practice thus exploring interdisciplinary & multidisciplinary approaches to pain management. Upon successful completion of this course, students will receive certificate related to Pain Management Certification and can Change- agents of health care.
