# International Journal of Evidence Based Nursing

International Journal of Evidence Based Nursing Nursing (IJEBN) covers the field of evidence-based nursing. It is designed to alert practicing nurses to important and clinically relevant advances in treatment, diagnosis, etiology, and prognosis. Evidence-based practice also provides opportunities for nursing care to be more individualized, more effective, streamlined, and dynamic. When evidence is used to define best practices rather than to support existing practices, nursing care keeps pace with the latest technological advances and takes advantage of new knowledge developments. Evidence-based nursing is an approach for making quality decisions and providing nursing care based upon personal clinical expertise in combination with the most current, relevant research available on the topic.
